

Creating a Skullcap or Base/Form Using Fosshape™

1. Cut out pieces using a Skullcap pattern and stitch together. You can use any cap pattern you already have or create one.

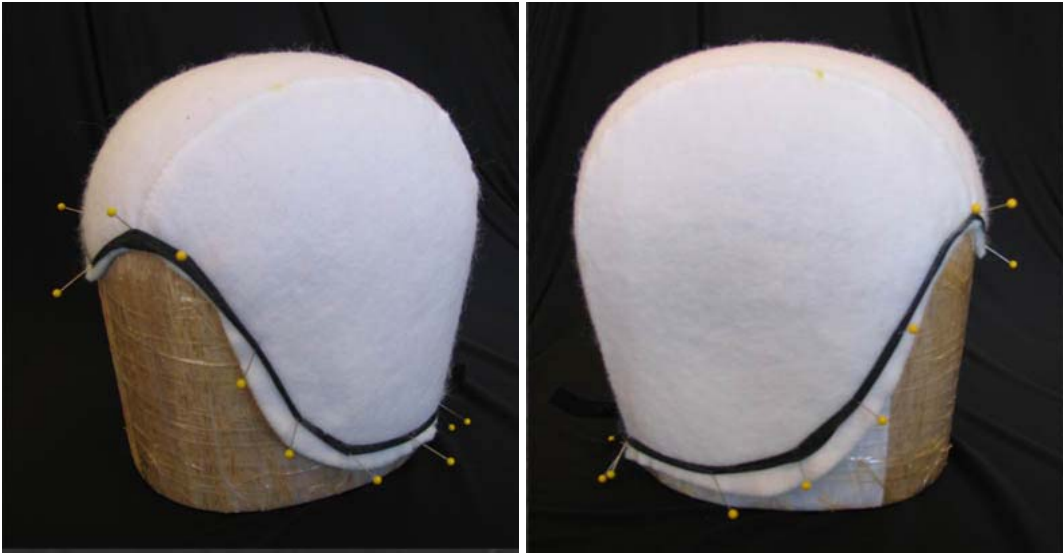

2. Fit Skullcap over wooden head block and pin in place. It is always best to cover the head block or form with plastic and tape.

3. Apply steam directly to the surface of the material, but keep the steamer moving so you do not leave marks. Steam the seams first and work your way down the Skullcap.

4. Skullcap stiffened with steam.

5. The stiffened wig base ready to be fit.

6. Fit the cap to your specified design requirements, established the edge, trim, wire and finish.
